Instruction Manual of
FS9000 Individual Dosage Alarm Device

I. Notice:

FS9000 radiation individual alarm device is a precise instrument. Please pay attention to

protection. The following suggestions are good for the instrument maintenance and longer use life.

1. Please keep dry in the storage and utilization; excessive humidity can damage the instrument.

2. It is forbidden to fall, knock or vibrate violently; otherwise, it can damage the detector.

3. In case of long-term idling, please take out the battery.

4. In case of operational failure, please send to the designated authorized service point for maintenance.

The company has the ultimate interpretation right to the manual.

The company has to reserve the right to upgrade the product performance or revise this operation instruction manual without in-advanced notification.

II. Safe operational regulations:

Please carefully read this operation instruction manual; otherwise, it may lead to operational failure of the instrument.

1. Please adopt standard No. 7 battery or charging battery.

2. The modification or maintenance without approval may damage the instrument.

3. Once you doubt about instrument malfunction in the normal operation, please shut down the instrument and swiftly evacuate from hazardous area; contact with the manufacturer as soon as possible.

III. Functional overview:

FS9000 radiation individual alarm device is collocated with highly flexible Geiger

counting pipe as detector; it is mainly responsible for monitoring the radiation of **X**, **γ**and hard

β ray in various radioactive work areas; it is featured as swift response and broad

measurement scope; it is able to display the dosage equivalent rate and accumulative dosage

in the work area; during the battery replacement, the calendar, time and accumulative data

can be stored permanently; it is widely applied in the individual safety protection monitor and

radioactive indication for work personnel in the following fields: nuclear power plant,

accelerator, iron & steel industry, chemical industry, isotope application, industrial **X**

and**γ**non-destructive flaw detection, radioactive medical treatment, Cobalt source treatment,

γradiation, radioactive laboratory and surrounding environment monitor of nuclear facilities.

Features:

1. Monitor of **X**, **γ**and hard **β** ray.

2. The instrument enjoys a high flexibility and can measure the environmental background.

3. Chinese and English operational interface.   Day and English operational interface

4. Real-time measurement and display of dosage rate and accumulative dosage.

5. Permanent data storage upon power cutoff.

6. Graphic LED and maximum screen. Resolution128X64

7. Low power consumption and battery under-voltage indication function.

8. The instrument can preset the alarm valve value of dosage rate and accumulative dosage.

9. Three selective alarm modes: sound, light and vibration.

10. The device saves the 500-day cumulative dose, the shutdown and power-off data is not

lost, and the USB data cable is connected to the computer. The total amount of the daily dose

and the graph data can be queried on the computer.

11. The device is equipped with a detachable clip.

12. Five detection units built into the device: μSv/h, μGy/h, m R/h.CPM .CPS

Technical index:

1. Detection ray: **X**, **γ** and hard **β** ray

2. Detector: Energy compensation GM pipe (Geiger counting pipe)

3. Measurement scope

    a. Dosage equivalent rate: 0.00—99999 μSv/h (maximum: 99.99 mSv/h)

    b. Accumulative dosage equivalence: 0.00μSv—999 mSv

4. Energy scope: 25 keV—1.5 MeV ≤ ± 30 % (as for 137 Cs I)

5. Relative innate error: ≤ ±4 % (137 CS　1 mSv/h) （Comprehensive error）

6. Flexibility: 80 CPM/μSv/h (as for Co—60)

7. Alarm valve value:

    a. Dosage rate: Selection among 0.5, 1.0, 1.5, 2.0, 2.5, 5.0, 10.0, 50.0, 100.0μSv/h at disposal.

    b. Accumulative dosage: Selection among 0.05, 0.5, 1.0, 1.5, 2.0, 5.0, 10.0, 20.0, 50.0, 100.0 m Sv at disposal.

8. Unit of dosage rate: μSv/h, μGy/h, m R/h.CPM .CPS

9. Measurement display: The dosage rate is displayed per second; the protection alarm response is less than 5 seconds.

10. Utilization environment:

Temperature: - 15 ºC — + 45 ºC

Relative humidity: ≤ 95 %

11. Power: Two or four 7 (AAA) batteries or rechargeable batteries.

12. Dimension and weight: 120g; 120 X 70 X 25mm

13. Battery life of the instrument: 360 hours for 2 sessions and 850 hours for 4 sessions.

IV. Key functional specification:

[Menu/OK] key: Enter into the parameter setup menu/confirm operation.

[Return/back] key: Return from next level of menu to previous level of menu.

[Switch/power] key: Switch on/off the instrument/start up the back light of LCD.

[▼] key: Downward key/minus one to digital item.

[▲] key: Upward key/plus one to digital item.

V. Basic operational methods

1. Startup

Prepare two No. 7 batteries; upon battery installation, the instrument sends out a "beep" and LCD shines; once the instrument has installed the batteries, press [Switch/power] key for 3 seconds—the instrument starts up and LCD displays the following figure:

```
IIII                    09:03:15
0.05mSv                 2.5uSv/h

            0.15μSv/h

            0.5μSv
```
2. Shutdown

Press [Switch/power] key for 3 seconds; the instrument sends out a "beep" and the instrument

is shut down.

3. Measurement

The instrument enters into the measurement status upon startup; during the measurement, it can place in the hand, pocket and backpack. The instrument has two measurement values: dosage rate in the unit of u Sv/h, u Gy/h and m R/h，CPM CPS. accumulative value of dosage rate within a certain period of time: accumulative dosage in the unit of uSv or mSv. Once any measurement value exceeds the setup alarm valve value, the instrument sends out alarm according to the setup alarm mode.

4. Specification of LCD display data

The instrument can display the following information:
(Figure 3)

In case of inadequate power supply voltage, the battery under-voltage indication sign displays and blinks.

Under normal condition, Err sign does not appear; permanent appearance of Err sign means damage of Geiger counting pipe detector.
VI. Parameter setup:

The following instrument parameters can be revised by the user: measurement unit, alarm setup, system clock, alarm mode and display setup. It can revise relevant parameters
through the keyboard.

1. Entry into parameter setup status

Under the measurement status, press [Menu/OK] key to enter into the menu selection screen as shown below:

```
1.   Measurement unit
2.   Alarm setup
3.   System clock
4.   Alarm mode
```

(Figure 4)

```
5.   Display setup

```

(Figure 5)

Press [▼] or [▲] key to move the icon and select setup items.

Select the setup items and then press [Menu/OK] key for subitem parameter setup; press [Return/back] key to exit the parameter setup.

2. Setup of measurement unit

Press [Menu/OK] key to enter into the menu; select the first menu item "1. Measurement unit" and then press [Menu/OK] key to enter for selection; display three items: uSv/h 、 uGy/hand m R/h,CPM,CPS. press [▼] or [▲] key to select the corresponding unit; press [Menu/OK] key for the second time and instrument stores the current item and returns to the previous level of menu; press [Return/back] key and instrument does not store the current item and returns to the previous level of menu.

```
1. Measurement unit
uSv/h
uGy/h
uR/h
CPM
CPS
```
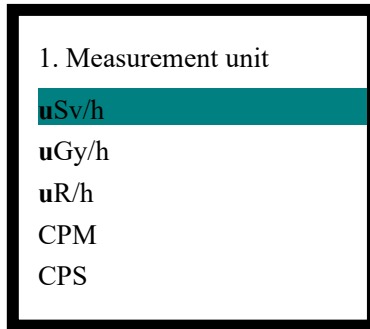

(Figure 6)

*Notice: In the parameter setup status of this instrument, press [Menu/OK] key to express the user's willing to select the current item and enter into the sub-menu; once this item has no sub-menu, store revision value of the current item and return to the previous level of menu; press [Return/back] key to express the user's abandonment of current revision value and return to the previous level of menu.*

3. Alarm setup

Press [▼] or [▲] key in the menu selection screen (Figure 4 and Figure 5) to select the second menu item "2. Alarm setup"; press [Menu/OK] key to enter into the item. It displays the following screen:

```
2. Alarm setup
1.. Alarm value of accumulative dosage
2. Alarm value of dosage rate
3. Clearing of accumulative dosage
```

(Figure 7)

A. Alarm value of accumulative dosage: Select this item in (Figure 7) screen and press [Menu/OK] key—the instrument enters into the sub-menu of accumulative dosage alarm value; the sub-menu includes nine valve values for selection: 0.05, 0.50, 1.00, 2.00, 5.00, 10.00, 20.00, 50.00 and 100.00 m Sv; select a proper valve value, press
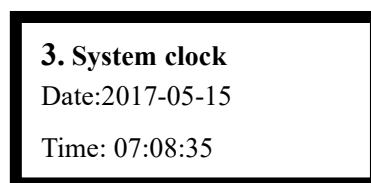

[Menu/OK] key and store setup and return; press [Return/back] key to abandon storage and return.

B. Alarm value of dosage rate: Press [▼] or [▲] key in (Figure 7) screen to select "2. Alarm value of dosage rate" and then press [Menu/OK] key—the instrument enters into the sub-menu of dosage rate alarm value; the sub-menu includes nine dosage rate valve values for selection: 0.50, 1.00, 1.50, 2.00, 2.50, 5.00, 10.00, 50.00 and 100.00μSv/h; the general radioactive work area has to adopt 2.5μSv/h.

C. Clearing of accumulative dosage: Select this item in (Figure 7) and press [Menu/OK] key to enter into deletion interface; press [▼] or [▲] key to select "YES" or "NO" to decide deletion of accumulative dosage.

4. System clock

Press [▼] or [▲] key in menu selection screen (Figure 4 and 5) and select the third menu: "3. System clock"; press [Menu/OK] key to enter for selection. It displays the following screen:

> **3. System clock**
> Date:2017-05-15
> Time: 07:08:35

(Figure 8)

Press [Menu/OK] key in Figure 8; "17" in "2017" blinks and displays; press [▼] or [▲] key to revise "17"; upon revision, press [Menu/OK] key to set up the instrument storage period and blinks the month; set up the figure of "second" according to the same method; press [Menu/OK] key to set up the instrument storage period and then return to the previous level

of menu.

5. Alarm mode

Press [▼] or [▲] key in the menu selection screen (Figure 4 and 5) and select 4th menu:

"4. Alarm mode"; press [Menu/OK] key to enter for selection. It displays the following screen:
4. Alarm mode

(Figure 9)

 in Figure 9 means vibration alarm; means sound alarm; means light alarm.

Press [▼] or [▲] key to select a proper audible and visual vibration alarm mode.

6. Display setup

Press [▼] or [▲] key in the menu selection screen (Figure 4 and 5) and select 2nd menu:

"5. Display setup"; press [Menu/OK] key to enter for selection. It displays the following

screen:

5. Display setup

Language
Contrast ratio

(Figure 10)

A. Language: Select this item in (Figure 10) screen and then press [Menu/OK] key to

select Chinese or English.

B. Contrast ratio: Select "contrast ratio" subitem in (Figure 10) screen and then press [Menu/OK] key to enter for subitem setup; press [▼] or [▲] key to revise the contrast ratio and thus modify LCD effect.

Conversion knowledge of radioactive units

I. International standard (China is in strict adherence to this standard) 1990

 1. Radioactive work personnel: 20 mSv/year (10 μSv/hour)

 2. General personnel: 1 mSv/year (0.52 μSv/hour)

 Remark: The above stipulations are in strict adherence to relevant suggestions of ICRP and

basic standard of China's radioactive sanitation protection (GB—4792—84).

Remark:

 Ra—226 (t = 1608 years)   r = 0.825 Lun. m^2/hour. Curie

 s – 137 (t = 29.9 years)   r = 0.33 Lun. m^2/hour. Curie

 Co – 60 (t = 5.23 years)   r = 1.32 Lun. m^2/hour. Curie
